To read **A Key to the Solar Compass, and Surveyor s Companion; Comprising All the Rules Necessary for Use in the Field. Also, Description of the Linear Surveys and Public Land System of the United** eBook, remember to refer to the link under and download the document or get access to additional information that are in conjunction with **A KEY TO THE SOLAR COMPASS, AND SURVEYOR S COMPANION; COMPRISING ALL THE RULES NECESSARY FOR USE IN THE FIELD. ALSO, DESCRIPTION OF THE LINEAR SURVEYS AND PUBLIC LAND SYSTEM OF THE UNITED** ebook.

Not Avail, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1873 Excerpt: .A second of time at the equator--1521-9 feet. RUNNING PARALLELS OF LATITUDE. Parallels of latitude are curved lines, and they increase in curvature from the equator to the poles, and cross all meridians at right angles. All lines run at any angle from the meridian, by courses taken at short intervals, partake more or less (according to the angle) of the curvature of parallels of latitude. When the compass is set to a true east and west course, in any latitude, the line of sight is at right angles to the meridian, and in consequence of the spheroidal figure of the earth, which causes the curvature of the parallels of latitude, this line of sight will converge or the equator. Some correction is therefore due to each course taken between tt0tions, to keep the line on the some parallel of latitude. This correction, however, is too small to make any material error in tracing the parallel, if the stations are not more than 30// of longitude apartc; but if larger than-this, the convergency on the equator should be computed for the distance, and allowed on the side towards the pole. But a more convenient and practical method of running parallels of latitude, or lines at any angle from the meridian, is to back sight on each forward sight, and take half the difference between their courses, when large enough to be perceptible. Thus, the forward and back sights, give double the amount of curvature between...
