Reviews

Complete information for publication enthusiasts. I have go through and that i am confident that i will gonna go through once more again in the future. Its been printed in an exceptionally basic way and is particularly just following i finished reading through this book by which basically altered me, alter the way i really believe.

Rarebooksclub.com, United States, 2013. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can usually download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1920 edition. Excerpt: .are neither large nor numerous (as in phosgene cases). In such patches there is crepitation, but practically everywhere else the lung is doughy and airless (Fig. 1). On section, clear fluid and blood pour out like water from a squeezed sponge. The tissue is red and semi-translucent with occasional lighter, air-containing patches. Near the margins of the upper lobes, there are a few small emphysematous areas. The bronchi, like the lung proper, are full of fluid, and in the large branches, there is some froth. The mucosa is somewhat reddened, and that of the smallest branches is rather opaque. About each there is a zone of edema, which is also conspicuous about the larger blood vessels. The trachea is full of sticky froth. Its mucosa is slightly reddened but is otherwise normal. The remaining organs, --liver, spleen, kidneys, adrenals, gastrointestinal tract, brain, --are negative. Microscopic Findings: There is little worthy of note aside from the respiratory tract. The tracheal epithelium is practically everywhere intact, but in places the superficial cells are somewhat shrunken and distorted and have lost their cilia; a few are desquamated. In the largest bronchi a similar condition is seen, but as one passes downward into the medium-sized cartilage-containing tubes, the injury is far more serious. The superficial cells are quite necrotic, and the entire layer is partially loosened from the wall (Fig. 5). In the bronchioles and atria, there is not only death of the living cells but necrosis of...
