

## Failure of Brass Volume N . 1; 1.--Microstructure and Initial Stresses in Wrought Brasses of the Type 60 Per Cent Copper and 40 Per Cent Zinc

Filesize: 3.26 MB

### ***Reviews***

*An extremely amazing publication with lucid and perfect answers. It is written in easy phrases instead of confusing. I am just very happy to inform you that this is the best pdf we have read in my own daily life and can be the greatest publication for at any time.*

## FAILURE OF BRASS VOLUME N . 1; 1.--MICROSTRUCTURE AND INITIAL STRESSES IN WROUGHT BRASSES OF THE TYPE 60 PER CENT COPPER AND 40 PER CENT ZINC

Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book \*\*\*\*\* Print on Demand \*\*\*\*\*.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1917 Excerpt: .to use a special device, which consisted of a piece of one-fourth inch steel wire bent to a right angle. One arm was bolted to the face plate of the lathe and the other went through a transverse hole in one end of the brass specimen and was lightly secured therein by bolts. This arrangement, it was observed, introduced no errors in the measurements. The length AB of the specimen over which it was turned down varied from 5 to 25 cm. The stresses in each layer were calculated from the formula  $20 e f f (l n - U f f - l (l n - , - l o )$  A consideration of the sources of error of such measurements shows that there are three principal kinds: (1) Errors due to temperature variation; (2) Errors in length measurements on the comparator; (3) Errors in the determination of the modulus of elasticity. The error due to (1) was very small as care was taken to secure a uniform temperature over the specimen and to measure this temperature to 0.1 C. The probable error in the length measurements was about 0.3 to 0.5 n (about 0.000012 to 0.00002 inch). This corresponds in the majority of cases to a probable stress error of about 300 to 500 pounds per square inch, although in a few cases where short lengths were taken this error would be from 600 to 1000 pounds per square inch. The probable stress error is directly proportional to any possible error in the modulus which is probably about...
