*This book is great. I have go through and so i am confident that i will going to read through once again again in the future. I am just easily can get a satisfaction of looking at a written book.  
(Miss Vernie Schimmel)*

## **REPORTS ON PUBLIC HEALTH AND MEDICAL SUBJECTS, VOL. 18: BACTERIOLOGICAL STUDIES; 1. THE INFLUNENCE OF IMMUNE SERUM ON THE BIOLOGICAL PROPERTIES OF PNEUMOCOCCI, 2. BACTERIAL VARIATION AND TRANSMISSIBLE AUTOLYSIS (CLASSIC REPRINT)**

Forgotten Books, United States, 2015. Paperback. Book Condition: New. 229 x 152 mm. Language: English . Brand New Book \*\*\*\*\* Print on Demand \*\*\*\*\*.Excerpt from Reports on Public Health and Medical Subjects, Vol. 18: Bacteriological Studies; 1. The Influnence of Immune Serum on the Biological Properties of Pneumococci, 2. Bacterial Variation and Transmissible Autolysis Sir, 1. I beg to submit two reports from the Ministry s Pathological Laboratory which form additional contributions to the study of epidemiological problems by bacteriological methods. 2. Dr. Griffith has discovered a new and simple way to distinguish colonies of virulent and non-virulent pneumococci, and has shown that strains derived from such different colonies differ not only in virulence but in their antigenic characters. This observation is of great importance in the choice of strains for the preparation of protective and therapeutic sera, since sera prepared with strains from the non-virulent colony have almost no protective action against infections with the virulent strain. Further, Dr. Griffith has found that exposure of a virulent strain to the action of a specific immune serum invariably leads to the appearance of non-virulent colonies, and, if the exposure is prolonged, to the transformation of the virulent pneumococci into an entirely non-virulent strain. This fact suggests that here we have one, at least, of the ways in which immune serum exerts its protective action in the animal body. 3. These observations are of wider interest, however, as a contribution to the study of bacterial variation. In recent years much attention has been given by bacteriologists to elucidation of causes which determine variations in the virulence of bacteria. The disconcerting fact has been brought to light that a pure culture, bred from a single colony or from a single bacterium, is not necessarily a collection of homogeneous individuals; it is often...
